

Logika boolean

not and or xor

```
print("=====not=====")
```

```
x = False
```

```
z = not x
```

```
print("nilai z = ", z)
```

#(jika ada salah, maka hasilnya salah)

```
print("===== AND =====")
```

```
24 = False
```

```
41 = False
```

```
nilai = x and y
```

```
print(24, "and", 41, "=", nilai)
```

```
24 = False
```

```
41 = True
```

```
nilai = x and y
```

```
print(24, "and", 4q, "=", nilai)
```

```
24 = True
```

```
41 = False
```

```
nilai = 24 and 41
```

```
print(24, "and", 41, "=", nilai)
```

```
24 = True
```

```
41 = True
```

```
nilai = 24 and 41
```

```
print(24, "and", 41, "=", nilai)
```
